SUMMARY

- Creator of **Luttie**, a browser-based color grading SaaS serving **4.5k+** users and around 100,000 visitors/mo.

EDUCATION

- **University of Limerick** Limerick, Ireland
B.S - Computer Science Aug 2024
Courses: Software Engineering, Operating Systems, Data Structures & Algorithms, Networking, Databases

EXPERIENCE

- **DNGI** Cork, Ireland
Software Engineer Nov 2025 – Present
 - Launched a browser-based color grading tool using a custom **WebGL2** multi-pass node graph with 10 reorderable stages.
 - Shipped an AI grading assistant that turns a text prompt or reference image into editable grade parameters, and ported the fragment shader to a CPU implementation so grades export as **.cube** LUTs server-side
 - Published an **MCP server** exposing 6 tools that let AI agents grade and export LUTs, with OAuth 2.1 and API-key auth, per-tool rate limits, and expiring handoff links to keep large files out of model context
- **BG Collections** Remote, Ireland
Software Engineer (Contract) Jul 2025 – Jul 2026
 - Migrated a production e-commerce platform off Firebase (DB, Storage, Auth) to a self-hosted stack — PostgreSQL with Drizzle ORM, session-based auth, and a volume-backed file storage — cutting the codebase by ~13,000 lines
 - Reduced Docker image size about 93% (2.8 GB → 200 MB) with a multi-stage build on Next.js standalone output, and implemented self-migrating deployments via an instrumentation hook that applies pending database migrations at container startup
- **Headstarter AI** Remote (US-based)
Software & AI Engineer Fellow Jun 2024 – Sept 2024
 - Built and evaluated multiple **RAG** pipelines and LLM-backed applications across a series of sprint projects, benchmarking model choices for latency, cost, and output quality to select the best fit per use case
- **General Motors** Limerick, Ireland
Software Engineer (Internship) Jun 2022 – Dec 2022
 - Built and deployed a greenfield internal seat reservation platform using Java Spring Boot and Angular, serving employees across GM Limerick, Dublin, and US offices, with database constraints and state validation preventing conflicting reservations

PROJECTS

- **fuzc (Fuzzy Comment Finder)** | *Rust, Ratatui, Crossterm, Regex*
 - Developed fuzzy comment finder processing **10,000+** files with **<50ms** search latency
 - Constructed multi-language lexical parser handling **4+** programming languages with finite state machine architecture, achieving **99.9%** comment extraction accuracy across nested structures and edge cases
 - Implemented zero-copy Rust architecture reducing memory allocation by **80%** through lifetime management and borrowing, supporting both CLI and real-time TUI interfaces with **<1MB** memory footprint
- **Tau (Cross-Platform Desktop App)** | *Electron, TypeScript, React, Next.js, PostgreSQL, Redis, R2*
 - Shipped and maintained a signed, auto-updating desktop app across **macOS and Windows**, cutting **33 releases** over 6 months through a tag-triggered GitHub Actions matrix handling Developer ID signing, Apple notarization, and NSIS packaging
 - Designed a two-secret device pairing handshake replacing manual license entry, storing only a SHA-256 of the device secret in Redis with TTL and verifying possession with constant-time comparison to keep the polling endpoint from leaking license keys
 - Extending the app with a **Java** plugin system, designing a versioned JSON manifest format and a published plugin API module kept separate from the runtime so third-party plugins compile against a stable contract
- **VSCoDeVim (Open-Source Vim Emulation Extension)** | *TypeScript, JavaScript*
 - Contributed to **VSCoDeVim**, the most popular Vim emulation extension for Visual Studio Code with **8M+** installs
- **fimi (Raycast-Style Fuzzy Finder for Premiere Pro)** | *Electron, TypeScript, CEP, WebSocket, C++*
 - Built a Raycast-style fuzzy finder for Adobe Premiere Pro, pairing an **Electron** command palette with a headless CEP bridge extension that talks to Premiere's ExtendScript engine over a local WebSocket to import matched assets directly into the active project
 - Indexed local media across all connected drives with a fault-tolerant async directory walk, serving instant fuzzy search against an in-memory snapshot, then offloaded thumbnail generation and perceptual-hash visual similarity search to a native **C++** Node addon in Electron's renderer

SKILLS

- **Languages:** Java, Go, Rust, Python, JavaScript, TypeScript, C++, SQL
- **Frameworks & Libraries:** Spring Boot, React, Next.js, Node.js, Electron, Angular, FastAPI
- **Cloud & DevOps:** AWS, GCP, Docker, CI/CD, GitHub Actions, Git, Linux
- **Databases & Tools:** PostgreSQL, MySQL, Redis, MongoDB, Drizzle ORM, JUnit, Vitest, Postman
- **AI & LLM Tooling:** LLM APIs (OpenAI, Anthropic, Gemini), LangChain, RAG Pipelines, MCP
